

Abbreviated bio

Katherine Chou is the Head of Product for Google Health Research, developing products that apply AI to advance the practice of medicine & science. Katherine specializes in incubating products and establishing sustainable businesses for Google.

She previously developed products within Google[x] Labs for Life Sciences, which has now become its own Alphabet company, Verily. Prior to that, Katherine ran global teams to develop partner solutions and developer ecosystems at Google for Mobile Payments, Mobile Ads, Mobile Search, GeoCommerce, and Android.

She is a Board member and Program Chair of Lewa Wildlife Conservancy and a fellow of the Zoological Society of London. She collaborates with other wildlife NGOs and the Cambridge Business Sustainability Programme in applying the Silicon Valley innovation mindset to new areas.

She holds a double major in Computer Science and Economics at Stanford University and an M.S. in CS.
